Product Description

With our universal raincover you will be well equipped even for bad weather, as it is very easy to install on your pushchair (e.g. on the Colibri, Visionx or Uptown) even when you are out and about. Thanks to the adjustable drawstring, the cover can be used on almost any pushchair or stroller so you could say one size fits all.

Through the transparent material you will have your little one always in sight, who can also explore the outside world. At the same time, the side ventilation outlets permit a good air circulation and prevent that the raincover steams up on the inside.

In addition, the raincover can be folded away to a very small size for transport.
